SCIENTIFIC INTERESTS AND EXPERIENCE

Scientific modelling. Translating (scientific) questions and problems to a (physical) computer model.

Experience with CPU-intensive models, such as the detailed evolution of a (binary) star or the simulation of a galaxy in e.g. C or Fortran on PCs and clusters.

Statistics. Analysis of results from computer models. Monte Carlo-simulations. Bayesians statistics using *Markov chains* for parameter estimation (9–15 dimensions) and *Bayesian model selection* (*Bayes factor, odds ratio, etc.*).

Signal processing. Experience with low- (LIGO-Virgo) and high (LISA) signal-to-noise ratios in signals from gravitational waves: sampling, filtering, Fourier transformations, match between signals, etc.

Data analysis. Analysis, reduction and (graphical) presentation of results from the processes mentioned above, using e.g. matplotlib, PLplot, GNU plot, MATLAB, etc. Experience with *Big data*.

Social interests. Sustainable generation and efficient use of energy and resources by a growing world population. Climate modelling, especially the feedback of greenhouse gasses, melting ice caps, changing wind and ocean currents, and the consequences for food production. Medical use of scanners, imaging and monitoring (MRI, CT, ultrasound, ECG, EEG, etc.) for e.g. neurological, cardiovascular or oncological research. Neurology and cognition; modelling and statistics of conscience, behaviour, language, religion, etc.

Popularisation of astronomy and public outreach. Amongst my activities are:

- Popular talks and courses (at public observatories, schools, special groups; since 1991)
- Public observing nights with (amateur) telescopes at Sonnenborgh Observatory, Utrecht (1991–2006)
- Popular-astronomy website hemel.waarnemen.com, providing *astrocalendars*, sky maps, and more (in Dutch/Flemish, since 2004). I predict events in the night sky which can be observed with simple means by a general public and draw about 5500 unique visitors a day (~2 million in 2020).
